

XMTCpro

New Generation Thermal Conductivity Binary Gas Analyzer

Panametrics' XMTCpro is a compact, and robust analyzer with SIL 2 by design for continuous measurement of gas concentrations in binary gas mixtures, including hydrogen, carbon dioxide, methane, helium, and many others.

Key Benefits

The XMTCPpro is available with an integrated display and intuitive user interface. The XMTCPpro also combines computer enhanced signal measurement for fastest response, real-time error detection, and MODBUS digital communication.

XMTCPpro brings the user:

- Ultra-stable thermal conductivity sensor
- Compact design for economic sample system integration
- Intuitive operating interface allows short learning curve, easy and flexible to use
- Integrated high contrast, easy-to-read multiparameter display
- MODBUS digital communication provides measurement and configuration data
- High level of reliability with SIL 2 by design

Minimal calibration and service

The XMTCPpro is the most stable thermal conductivity analyzer on the market today. The rugged XMTCPpro measuring cell resists contamination and remains insensitive to flow variations. Since the design uses no moving parts, the transmitter can easily withstand the shock, vibration and harsh environments found in many industrial applications.

If the transmitter requires maintenance, its modular construction permits fast and easy servicing. Users can field-calibrate it quickly and replace the plug-in measuring cell with a pre-calibrated spare in minutes.
